                       8:30-9:00 "An Experiment in Investment Decision-Making: Agile Portfolio
                       Management in a Research Library" LANL, Nicholas Taylor
                       For over a year, the LANL Research Library has been using an Agile
                       portfolio management framework to help surface, evaluate, and make
                       better informed and socialized decisions about candidate investments in
                       our programs, products, and services, with the goal of increasing the
                       impact and alignment of where we focus our resources.
                       This presentation will review how that experiment has been going, the
                       results that we have observed, and plans for prospective refinement.

                       9:00-9:30 Extracting data elements from PDF documents, automatically, reliably,
                       at scale" LANL, Martin Klein
                       In this talk I will present a LANL-developed pipeline to extract metadata,
                       references, as well as tables and figures from PDF documents submitted   for
                       review and release. The obtained data will be used for values-added
                       downstream processing such as indexing, summarization, keyword generation,
                       and archiving.

                       9:30 – 10:00 ICPT Agreements – Tami Sandberg (NREL) summary and
